

### DESCRIPTION

The EV2388-QE-00A is an evaluation board for MP2388, a high frequency, synchronous, rectified, step-down converter with built-in Power MOSFETs. The MP2388 offers a very compact solution to achieve 1A continuous output current with excellent load and line regulation over a wide input supply range.

Current-mode operation provides fast transient response and eases loop stabilization.

Full protection features include over-current protection and thermal shutdown.

The MP2388 requires a minimum number of readily available standard external components and is available in a space saving QFN-8 (1.5mmx2.5mm) package.

## QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output between 4.5V and 21V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on. The board will automatically start up.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 1.6V to turn on the regulator, or less than 0.9V to turn it off.
6. Float AAM pin or drive AAM to a high level voltage to set MP2388 work at forced PWM mode.
