EV24830-S-00A

Buck- Boost Mode White LED Driver 5V – 90V, Programmable Frequency

The Future of Analog IC Technology

DESCRIPTION

The MP24830 is a 90V, white LED driver suitable for inverting step-up/down applications. It supports a wide input range with excellent load and line regulation. Its programmable current limit provides customized applications with wide power range. Current mode operation provides fast transient response and eases loop stabilization. Fault condition protection includes thermal shutdown, cycle-by-cycle peak current limiting, open strings protection and output short circuit protection.

The MP24830 incorporates both DC and PWM dimming onto a single control pin. The separate input reference ground pin allows for direct enable and/or dimming control for a positive to negative power conversion

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	VIN	5 To (V_{IN}+V_{OUT})<80	V
Enable Voltage	VEN	5	V
LED Current	ILED	1	A
Switching Frequency	FS	200	kHz
Output Voltage Protection	V_{OVP}	28	V

FEATURES

- Programmable Maximum Output Current
- Unique Operation (Buck-Boost Mode)
- Wide 5V to 90V Operating Input Range
- Adjustable Switching Frequency
- Analog and PWM Dimming
- 0.2V Reference Voltage
- 5μA Shutdown Mode
- No Minimum LED Required
- Stable with Low ESR Output Ceramic Capacitors
- Cycle-by-Cycle Over Current Protection
- Thermal Shutdown Protection
- Open Strings Protection
- Output Short Circuit Protection
- Available in 14-Pin SOIC14

APPLICATIONS

- General LED Illuminations
- Automotive LED Lighting
- TV Backlighting System
- LCD Backlight Panels
- Handheld Computers

EV24830-S-00A EVALUATION BOARD

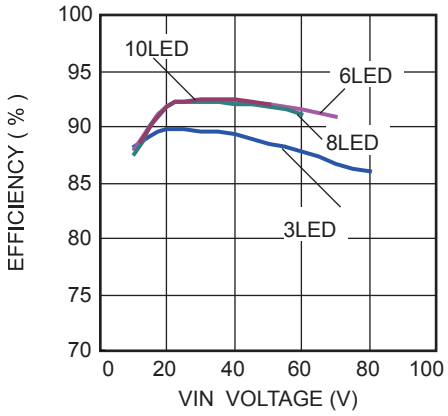
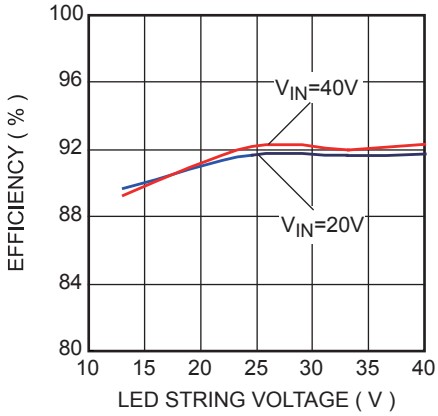
EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.
V_{EN}=5V, V_{IN}=12V, I_{OUT}=1A, L=22μH, T_A=25ºC, Unless otherwise noted.

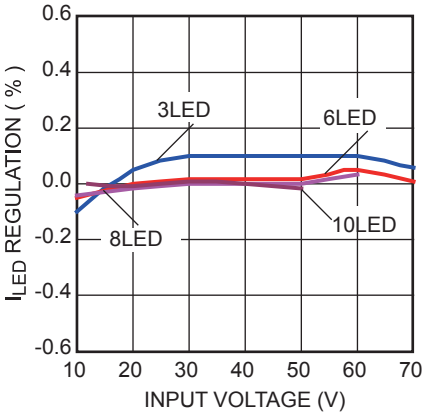
Efficiency vs. Input Voltage



Efficiency vs. LED String Voltage

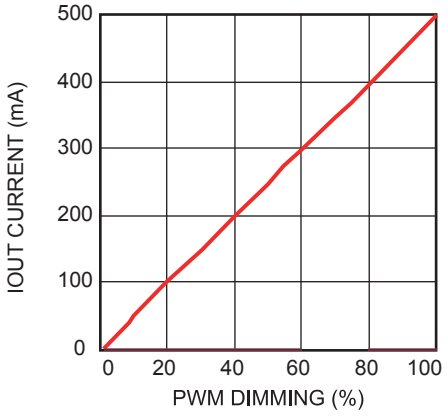


I_{LED} Line Regulation vs. V_{IN}



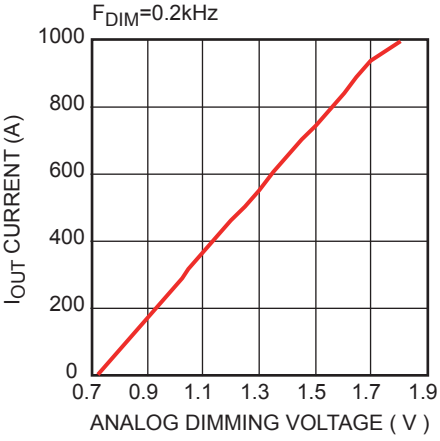
I_{LED} vs. PWM Dimming

V_{IN} =25V, 3LED, F_{DIM}=0.2kHz



I_{LED} vs. Analog Dimming

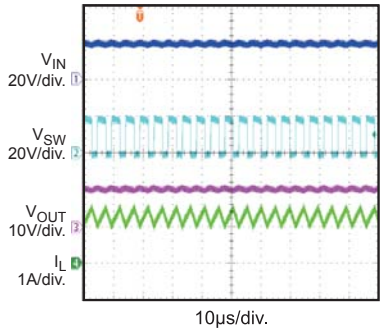
V_{IN} =20V, 3LED, I_{OUT}=1A,
F_{DIM}=0.2kHz



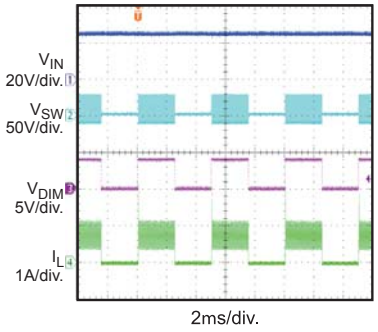
EVB TEST RESULTS *(continued)*

Performance waveforms are tested on the evaluation board.
V_{EN}=5V, V_{IN}=12V, I_{OUT}=1A, L=22µH, T_A=25ºC, Unless otherwise noted.

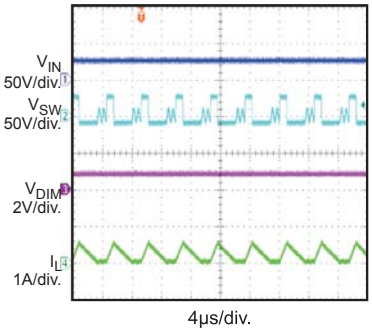
Steady State
V_{IN} =8V, 3LED, I_{OUT}=1A



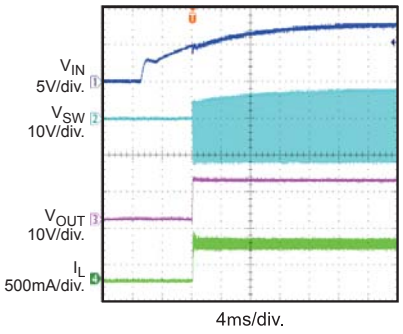
PWM Dimming
V_{IN} =25V, 3LED, F_{DIM}=200Hz/50%



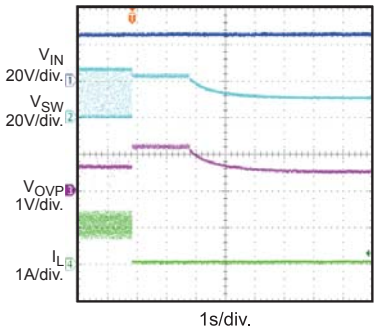
Analog Dimming
V_{IN} =25V, 3LED, V_{DIM}=0.9V



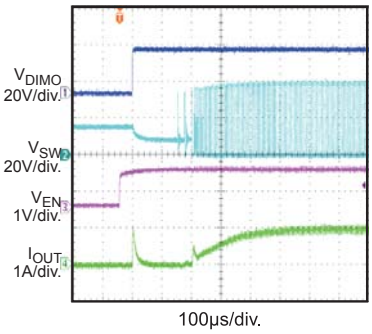
Power Ramp Up
V_{IN} =8V, 3LED



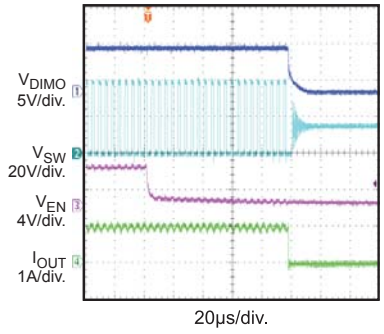
Open LED Protection
V_{IN} =25V, 3LED, I_{LED}=1A



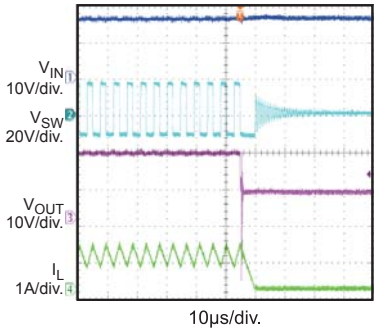
Enable Power Up
V_{IN} =25V, 3LED



Enable Power Down
V_{IN} =25V, 3LED



Short LED Protection
V_{IN} =16V, 3LED



Short LED To VSS
V_{IN} =25V, 3LED

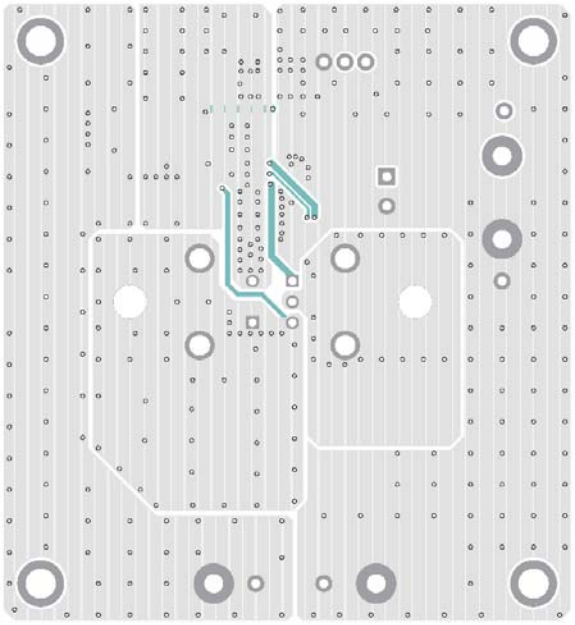

Figure 4—Bottom Layer

QUICK START GUIDE

1. Connect the LED string between “LED+” (anode of LED string) and “LED-“(cathode of LED string). The LED string voltage should be Less than 28V (7 LED string voltage is about 25V), since the output voltage protection is about 28V.
2. Set a VIN power supply voltage (range from 5V to V_{IN}+V_{OUT} < 80V) and connect the input between the “VIN” and “INGND” terminals as shown in the EVB board.
3. Set a second power supply 5V as the EN input supply to the EVB.
4. Turn-off all power supplies.
5. Turn-on the input voltage power supply.
6. Turn on the 5V EN power supply. All the LED strings should be lighted.
7. The switching frequency was set by R6, which is about 200kHz.
8. To demo the dimming function on DIM connector: using a function generator set the PWM signal amplitude to 5V and the frequency within 100Hz to 20kHz range for PWM dimming. For analog dimming, adjust the power supply from 0.7V to 2V.
