

## DESCRIPTION

The EV2612ER-01A is an evaluation board for the MP2612, a high performance 2~3 cell Li-Ion battery switching charger with built-in internal power MOSFET.

EV2612ER-01A achieves up to 2A charge current over a wide input supply range. The charge current can be programmed by sensing the current through an accurate sense resistor.

MP2612 regulates the charge current and charge voltage using two control loops to realize high accuracy CC charge and CV charge.

Fault condition protection includes time out control, battery full terminated control, thermal protection, battery temperature monitoring and protection. The board also indicates AC adapter power good and charge status indications to the system.

## ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	$V_{IN}$	10~24	V
Charge Current	$I_{CHG}$	2	A

## FEATURES

- Charges 2-, 3- Series Li-Ion Cells
- Wide Operating Input Range
- Up to 2A Programmable Charging Current
- $\pm 0.75\%$   $V_{BATT}$  Accuracy
- Up to 90% Efficiency
- Fixed 600kHz Frequency
- Preconditioning for Fully Depleted Batteries
- Charging Operation Indicator
- Input Supply and Battery Fault Indicator
- Thermal Shutdown
- Battery Temperature Monitor and Protection

## APPLICATIONS

- Distributed Power Systems
- Chargers for 2-Cell or 3-Cell Li-Ion Batteries
- Pre-Regulator for Linear Regulators
- Smart Phones
- Net-book

For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

## EV2612ER-01A EVALUATION BOARD

## PRINTED CIRCUIT BOARD LAYOUT

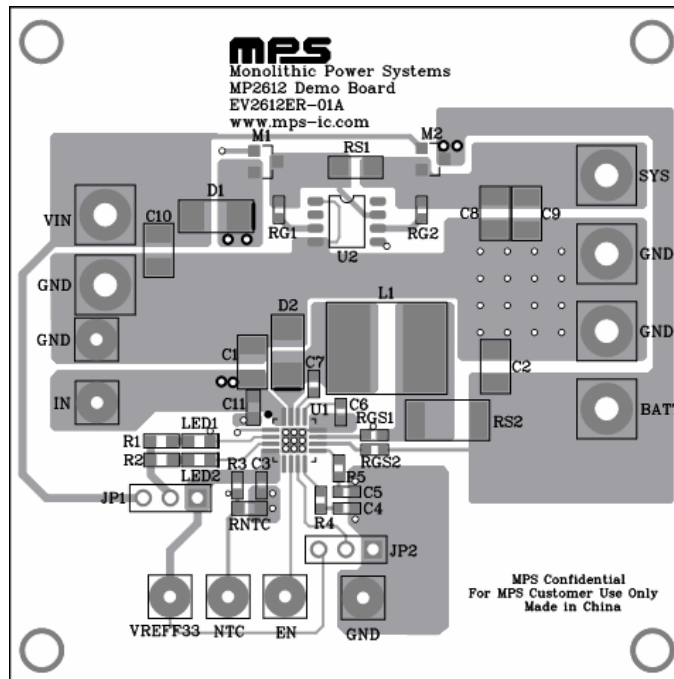

Figure 1—Top + Top Silk Layer

Figure 2—Bottom Layer

## QUICK START GUIDE

This board is used for the application of standalone switching chargers which can charge 2- or 3-cell Li-ion batteries. The board layout accommodates most commonly used capacitors.

The default output voltage on this board is preset to 8.4V for 2-cell Li-Ion battery. Connect the CELLS pin to VREF33 to regulate the output to 12.6V for 3-cell Li-Ion battery.

The two LEDs are operating status indicators. When the input is OK for charging the battery load, LED1 will be on. Otherwise it is off. The LED2 is on when the charging operation is normal and turns off once the charging is completed. If any event including timer out, thermal protection and EN disabled occurs, Both LED1 and LED2 will be off.

### 1. Charge current setting:

The charge current can be programmed by the sense resistor RS2, the formula is as:

$$I_{\text{CHG}}(\text{A}) = \frac{200\text{mV}}{\text{RS2}(\text{m}\Omega)}$$

2. Attached the input voltage (Typ:  $V_{\text{IN}}=19\text{V}$ ) and the input ground to the VIN and GND pins, respectively.
3. Attach the positive and negative ends of the load to the SYS and GND pins, respectively.
4. Attach the positive and negative ends of the battery to the BATT and GND pins, respectively.
5. For power path application, it needs additional current sensing circuit stuffed, including MP8110, RS1, M1 and M2. Please contact us for customize EVB if you need.

Please see the datasheet of MP2612 for further detailed information.
