

EV2664-G-00A

Evaluation Board of 500mA Linear Charger with Power Path Management for Single-Cell Li-Ion Battery in QFN package

DESCRIPTION

The EV2664-G-00A is an evaluation board for the MP2664, a highly-integrated single-cell Li-Ion/Li-Polymer battery charger with system power path management, targeted at space limited portable applications. It takes input power from either an AC adapter or a USB port to supply the system load and charge the battery independently. The charger section features constant current pre charge (PRE.C), constant current fast charge (CC) and constant voltage (CV) regulation, charge termination and charge status.

EV2664 ensures the continuous power to the system by automatically selecting the input, the battery or both to power the system.

EV2664 provides system short circuit protection to prevent the Li-Ion battery from being damaged due to excessive high current.

EV2664 cuts off the path between battery and system when battery UVLO to prevent the Li-Ion battery from being overly discharged.

Through the I2C connector on EV2664, the customer can program the charging parameters, such as: input current limit, input minimum voltage regulation, charging current, battery regulation voltage, and battery UVLO.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	4.35 - 5.5	V
Battery Voltage	V _{BATT}	3.60 - 4.545	V
Input Current Limit	I _{IN_LIM}	85 - 455	mA
Input Minimum Voltage Regulation	V _{IN_MIN}	V _{BATT} +400mV	V
Charge Current	I _{CC}	8 - 535	mA
Discharge Current	I _{DSCHG}	400 - 3200	mA

FEATURES

- Fully Autonomous Charger for Single-Cell Li-Ion/Polymer Batteries
- Current Limit for USB Port
- Complete Power Path Management for Simultaneously Powering the System and Charging the Battery
- 0.5% Charging Voltage Accuracy
- 13V Maximum Voltage for the Input Source
- I²C Interface for Setting charging Parameters and Status Reporting
- Robust Charging Protection Including Battery Temperature Monitor and Programmable Timer
- Battery Disconnection Function

APPLICATIONS

- Wearable devices
- Smart Handheld Devices
- Fitness Accessories
- Smart Watches

QUICK START GUIDE

This board is designed for MP2664 which is a highly-integrated single-cell Li-Ion/Li-Polymer battery charger with system power path management function. And layout accommodates most commonly used capacitors. The default function of this board is preset for charger mode and the charge full voltage is preset to 4.200V for 1 cell Li-Ion battery.

Evaluation Platform Preparation:

- 1) A computer with at least one USB port and a USB cable. The MP2664 evaluation software must be properly installed.
- 2) USB-to-I²C Communication Kit (EVKT-USBI2C-02)

- 3) Software - Double-click on the “MP2664 Evaluation Kit” EXE file to run the MP2664 evaluation software. The software supports the Windows® XP and Windows 7 operating systems. The MP2664 Evaluation Kit EXE file is available on MPS website:

4) Original Test Setup for MP2664 in Figure 6

Attach the input voltage (VIN=5V) and the input ground to the VIN and GND pins, respectively.

Attach the positive and negative ends of the load to the SYS and GND pins, respectively.

Attach the positive and negative ends of the battery (VBATT=3-4.2V) to the BATT and GND pins, respectively.

Procedure

Make sure all the connections are normal – both the USB-to-I2C Communication Kit and the EV2664-G-00A are connected correctly. It is ready to run the program!

Others

1. LDO FET Control:

LDO_FET Off (EN_HIZ)

This bit only controls the on/off of the LDO FET.

2. BATT FET Control:

BATT_FET Charge Off (CEB) EN_Shipping Mode (FET_DIS)

CEB only control the on/off of the Battery FET in charge mode.

FET_DIS selected could turn off the Battery FET at both charge and discharge mode.

FET_DIS unselected could not turn on Battery FET; pull INT to low by push button could turn on Battery FET when it's turned off by FET_DIS.
