# EV2669-R-00A

## Fast Charge Power Bank EV Board

### DESCRIPTION

The EV2669-R-00A is an evaluation board for the MP2669, a high-integrated, flexible switch-mode battery charge management and system power path management device.

EV2669-R-00A achieves up to 5A charge current with up to 14V input. The charge current can be automatically set by detecting the input adaptor types.

EV2669-R-00A achieves up to 18W boost output with up to 12V output voltage. All the parameters and control can be easily accessed via the I2C interface.

### ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V <sub>IN</sub>	4-12	V
Charge Full Voltage	V <sub>BF</sub>	4.2	V
Charge Current	I <sub>CHG</sub>	Up to 5	A
Output Voltage	V <sub>OUT</sub>	5-12	V
Output power	P <sub>OUT</sub>	Up to 18	W
Output Current Limit	I <sub>OUT LIM</sub>	3.0 / I2C	A

### FEATURES

- 4.0V to 14V Operation Voltage Range
- Up to 24V Sustainable Input Voltage
- Compliant with BC1.2 and HV Fast Charge
- Input-Current-Based and Input-Voltage-Based Power Management
- Up to 5A Programmable Charge Current
- 4.2V Charge Voltage with 0.5% Accuracy
- 4 LEDs Battery Gauge Indicators
- Thermal Regulation and Thermal Shutdown
- Reverse Boost Operation Mode with up to 3A boost current and adjustable 5V to 12V boost voltage to support QC3.0
- USB Output Cable Impedance Compensation
- Complete Protection
  - Short Circuit Protection for Boost Mode and Pass-through Path
  - Over voltage protection for input and battery

### APPLICATIONS

- Sub-Battery Applications
- Power-Bank Application

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance.

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

## EV2669-R-00A EVALUATION BOARD

## QUICK START GUIDE

This board is designed for MP2669 used as a fast charge power bank total solution.

- 1, Connect the battery to the BATT+ and BATT- connector.
- 2, Plug in an adaptor to USB1 port and the battery protection IC will wake up.
- 3, now the demo board can act as a complete power bank and is ready to run with Charge/discharge function.

Note1:

- 1) Please charge first to avoid the BATT\_UVLO lockout (BATT<3V).
- 2) when 12V/9V HVDCP plugged in, the power on sequence is USB1 detection first.
  - 2.1) if no load at USB2, USB1 keeps at the (QC 12V/9V).
  - 2.2) if there is load at USB2, force the Vin @ 5V.

### ❖Notes❖

1. For the other detailed description on the operation of this part, please contact local FAE to apply the latest datasheet and the MCU coding.
