

The Future of Analog IC Technology®

# EV4034-S-00C

85VAC~265VAC/50Hz, 40V/150mA

Non-Isolation Off-line LED Driver Evaluation Board

## DESCRIPTION

The EV4034-S-00C Evaluation Board is designed to demonstrate the capabilities of MP4034. The MP4034 can be used for non-isolated LED lighting controller.

The EV4034-S-00C typically drives a 6W LED string with a 40V<sub>TYP</sub>, 150mA LED load from 85VAC to 265VAC, at 50Hz.

The EV4034-S-00C has excellent efficiency and meets IEC61547 surge immunity and EN55015 conducted EMI requirements. It has multiple protections, including lamp open protection, short-circuit protection, a cycle-by-cycle current limit, and over-temperature protection.

## ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V <sub>IN</sub>	85 to 265	VAC
Output Voltage	V <sub>OUT</sub>	40	V
LED Current	I <sub>LED</sub>	150	mA
Output Power	P <sub>OUT</sub>	6.0	W
Efficiency (full load)	η	>80	%

## FEATURES

- No External Compensation Components
- Precise Constant Current (CC)
- Integrated 700V MOSFET with Minimal External Components
- Variable Off-Time Peak-Current Control
- 600µA High-Voltage Current Source
- Up to 6W Output Power
- Over-Voltage Protection (OVP)
- Over-Temperature Protection (OTP)
- Lamp Open Protection
- Natural Frequency Dithering for Improved EMI Signature
- Low Cost and Simple External circuit
- Fits GU10 LED

## APPLICATIONS

- Solid-State Lighting
- Industrial & Commercial Lighting
- Residential Lighting

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology", are Registered Trademarks of Monolithic Power Systems, Inc.

**Warning:** Although this board is designed to satisfy safety requirements, the engineering prototype has not been agency approved. Therefore, all testing should be performed using an isolation transformer to provide the AC input to the prototype board.

## CIRCUIT DESCRIPTION

The EV4034-S-00C is configured for non-isolation control topology, It can simplify the schematic and reduce BOM costs. It can also achieve an accurate LED current.

The input stage consists of FR1 and BD1. FR1 is protects against component failure or some excessive short events, and can restrain the inrush current.

The  $\pi$  filter (C1, L1 and C2) guarantees that the conducted EMI meets the EN55015 standard.

R2, C3 and D1 provide the VCC power supply.

The resistor divider (R3 and R4) provides lamp open protection by sampling the voltage on the auxiliary winding. When an open circuit occurs, the output voltage remains constant.

T1 is the power transformer, the structure of which is also very important to pass EMI test.

D2, C4 and R5 compose output circuit. D2 is a schottky diode for better efficiency. C4 is a ceramic capacitor for lower output voltage ripple and R5 is the dummy load for lamp open protection.

Efficiency vs. Input Line Voltage

Line Regulation

Line Regulation

Surge Test

Line-to-Line 500V surge testing was completed according to IEC61547.

Input voltage was set at 230VAC/50Hz. Output was loaded at full load and operation was verified following each surge event.

Surge Level (V)	Input Voltage (VAC)	Injection Location	Injection Phase (°)	Test Result (Pass/Fail)
+/-500	230	L to N	0	Pass
+/-500	230	L to N	90	Pass
+/-500	230	L to N	180	Pass
+/-500	230	L to N	270	Pass

## QUICK START GUIDE

1. Preset AC Power Supply to  $85\text{VAC} \leq V_{\text{IN}} \leq 265\text{VAC}$ .
2. Turn Power Supply off.
3. Connect the LED string between “LED+” (anode of LED string) and “LED-” (cathode of LED string).
4. Connect Power Supply terminals to AC  $V_{\text{IN}}$  terminals as shown on the board.
5. Turn AC Power Supply on after making connections.
