

DESCRIPTION

The EV5083-G-00A is an evaluation board for the MP5083, a low R_{DS(on)} load switch with current monitoring.

The MP5083 is a load switch, designed to provide 2A load protection covering 0.5V to 5.5V voltage range. With low R_{DS(on)} in tiny package, the MP5083 provides very high efficiency and space-saving solution for notebook, tablet and other portable applications.

The MP5083 is equipped with the very accurate current monitoring function. The gain of the current monitor can be scaled to different applications. With the soft start function, the MP5083 can avoid inrush current during circuit start-up. The MP5083 also provides other features, like power good, output discharge function, and fast short-circuit response time.

The EV board can deliver a continuous 2A load current over 0.8V-to-5.5V operating input range.

QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the V_{OUT} and GND pins, respectively.
2. Preset the power supply output between 0.8V and 5.5V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the V_{IN} and GND pins, respectively.
4. Follow the step 1-3 to set the V_{CC} voltage between 3V and 5.5V.
5. Turn the power supply on. The MP5083 will automatically startup.
6. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 1.5V to turn on the regulator or less than 1.3V to turn it off.
7. Use R1 to set the output current limit. C5 to set the SS time, Follow the Application Information section in the device datasheet to select appropriate R1, C5.
