

### DESCRIPTION

EV5505E-L-00A Evaluation Board is designed to demonstrate the capabilities of MP5505E. MP5505E is designed to provide back-up power in the event of a power loss. The internal input-current-limit block with dv/dt control prevents inrush current during system start-up; the bus voltage start-up slew rate is programmable. MPS' patented power back-up control circuit minimizes the storage capacitor requirement. It pumps the input voltage to a higher storage voltage and releases the energy over a hold-up time to the system in the case of an input outage. The storage voltage and the release voltage are both programmable for different system requirements.

The MP5505E is available in a QFN20 (3mmX4mm) package.

### ELECTRICAL SPECIFICATION

| Parameter               | Symbol               | Value | Units |
|-------------------------|----------------------|-------|-------|
| Input Voltage           | V <sub>IN</sub>      | 3.3-5 | V     |
| Charge Voltage          | V <sub>STRG</sub>    | 12    | V     |
| Bus Release Voltage     | V <sub>RELEASE</sub> | 2.9   | V     |
| Buck Max Output Current | I <sub>RELEASE</sub> | 4     | A     |

### FEATURES

- Wide 2.7 to 7V Operating Input Range for MP5505E
- 60mΩ Back to Back SW for in Input current Limit Circuit and Reverse Current Blocking
- Reverse Current Protection
- 6V Bus Clamping Voltage
- Power on Reset
- Adjustable dv/dt Slew Rate for Bus Voltage Start up
- EN and Power Good indicator
- Thermal protection
- Available in an QFN20(3mmx4m) Package

### APPLICATIONS

- Hard Dish Drives
- Solid State Drives
- Power Back-Up/Battery Hold-Up Supplies

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are registered trademarks of Monolithic Power Systems, Inc.

## EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{IN} = 3.3V$ ,  $V_{STORAGE} = 12V$ ,  $V_{RELEASE} = 2.9V$ ,  $L = 4.7\mu H$ ,  $T_A = +25^\circ C$ , unless otherwise noted.

### BOOST STEADY STATE

$I_B = 0A$

### VIN POWER ON

$I_B = 0A$

### ENCH POWER ON

$I_B = 0A$

### ENCH POWER OFF

$I_B = 0A$

### EN POWER ON

$I_B = 0A$

### EN POWER OFF

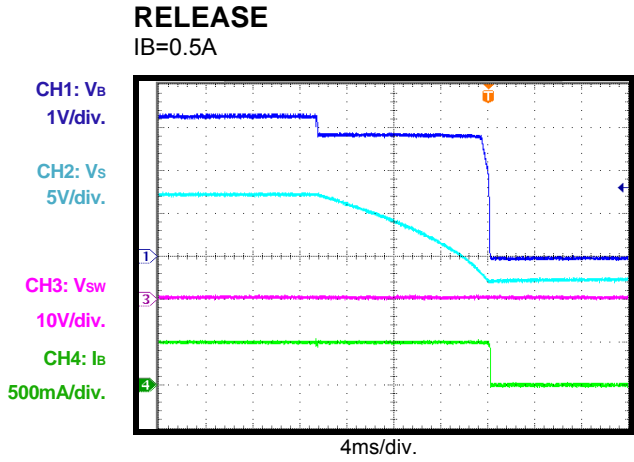

$I_B = 0A$

**EVB TEST RESULTS (continued)**

Performance waveforms are tested on the evaluation board.

$V_{IN} = 3.3V$ ,  $V_{STORAGE} = 12V$ ,  $V_{RELEASE} = 2.9V$ ,  $L = 4.7\mu H$ ,  $T_A = +25^{\circ}C$ , unless otherwise noted.

**Figure 1—Top Silk Layer**

**Figure 2—Top Layer**

**Figure 3—Bottom Layer**

## QUICK START GUIDE

The board layout accommodates most commonly used components.

1. Connect the positive and negative terminals of the load to VB and GND pins, respectively.
2. Preset Power Supply to 3.3V. Turn off Power Supply.
3. Connect Power Supply terminals to:  
Positive (+): VIN  
Negative (-): GND
4. Turn on Power Supply after making connections, MP5505E will charge the storage capacitor to 12V after DCDC converter completes start-up.
5. In order to observe the power release performance, following two methods can be applied:  
Turning off the power supply.  
Short VIN to GND directly. Note: make sure bench power supply have output current limiting when doing this test.
6. Use R1 and R2 to set release voltage:

$$V_{\text{RELEASE}} = 0.801V \times \frac{R1 + R2}{R2}$$

Similarly, R11 and R12 can be chosen for storage voltage setting:

$$V_{\text{STRG}} = 0.795V \times \frac{R11 + R12}{R12}$$
