

DESCRIPTION

The EVM38111-R-00A Evaluation Board is designed to demonstrate the capabilities of MPS' MPM38111. The MPM38111 is a Dual Channels DC-DC Module. The module includes monolithic step-down switch mode converter with built-in internal power MOSFETs and inductors. It's designed to simplify power system design and provide ease of use.

The MPM38111 operates from a 2.7V-to-6V input, generates an output voltage as low as 0.608V, and has a 45µA quiescent current that makes it ideal for powering portable equipment that runs on a single cell lithium-ion (Li+) battery.

QUICK START GUIDE

The output voltage of this board is set externally by operating from +2.7V to +6V input. The default output voltage of this board is set to $V_{OUT1}=1.8V$, $V_{OUT2}=1.2V$.

1. Preset Power Supply to $2.7V \leq V_{IN} \leq 6V$.
2. Turn Power Supply off.
3. Connect Power Supply terminals to:
 - a. Positive (+): V_{IN}
 - b. Negative (-): GND
4. Connect Load to:
 - a. Positive (+): V_{OUT1}
 - b. Negative (-): GND
 - c. Positive (+): V_{OUT2}
 - d. Negative (-): GND
5. Turn Power Supply on after making connections.
6. To enable the MPM38111, apply a voltage, $1.2V \leq V_{EN} \leq 6V$, to the EN pin. To disable the MPM38111, apply a voltage, $V_{EN} < 0.4V$, to the EN pin. The EN pin can be connected to V_{IN} with a 100k Ω resistor for automatic startup.
7. The output voltage V_{OUT} can be changed by varying R1. Calculate the new value by formula:

$$R2 = \frac{R1}{\frac{V_{OUT}}{0.608V} - 1}$$
