# EVNB679

## 26V, Low Iq, High Current, Fixed 5.5V-8A Synchronous Buck Converter with 100mA LDO

PRELIMINARY SPECIFICATIONS SUBJECT TO CHANGE

### DESCRIPTION

The NB679 is a fully integrated high frequency synchronous rectified step-down switch mode converter with fixed 5V Vout. It offers very compact solution to achieve 8A continuous output current and 10A peak output current over a wide input supply range with excellent load and line regulation.

The NB679 operates at high efficiency over a wide output current load rang based on MPS proprietary switching loss reduction tech and internal Low Ron Power MOSFETs

Adaptive Constant-On-Time (COT) control mode provides fast transient response and eases loop stabilization. The DC auto tune loop provides good load and line regulation.

NB679 also provide fixed 5V LDO which can be used to power the external peripherals.

Full protection features include OC Limit, OVP, UVP and thermal shut down. The converter requires minimum number of external components and is available in QFN 2x3 packages.

### FEATURES

- Wide 5.5V to 26V Operating Input Range
- Fixed 5V Vout, Support 5.5V-5V
- Ultrasonic Mode
- 100µA low quiescent Current
- 8A Continous Output Current
- 10A Peak Output Current
- Adaptive COT for Fast transient
- DC Auto Tune Loop
- Stable with POSCAP and Ceramic Output
- Built-in 5V, 100mA LDO with Switch Over
- 1% Reference Voltage
- Internal Soft Start
- Output Discharge
- 700kHz Switching Frequency
- OCP, OVP, UVP(metal Hiccup) Protection and Thermal Shutdown.
- Latch off reset via EN or Power cycle.

### APPLICATIONS

- Notebook Systems and Tablet PC
- Networking Systems and Server
- Personal Video Recorders
- Distributed Power Systems

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Products, Quality Assurance page. "MPS" and "The Future of Analog IC Technology" are registered trademarks of Monolithic Power Systems, Inc.

## QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the one power supply output between 5.5V and 24V as VIN, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the VIN power supply on. The NB679 will automatically startup.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 2V to turn on the regulator or less than 0.4V to turn it off.
