

EVQ6524-R-00A

28V, 0.9A Quad Half-Bridge Motor Driver Evaluation Board

DESCRIPTION

The EVQ6524-R-00A is an evaluation board for the MPQ6524, a four half-bridge DMOS output driver with integrated power MOSFETs. It can drive up to four different loads. The input voltage ranges from 7V to 28V, with the up to 0.9A output current capability.

The four half-bridges of MPQ6524 can be controlled separately from a standard serial data interface, and have various diagnostic functions. It has very low quiescent current in standby mode makes a wide range of applications possible.

Fully protection includes short-circuit protection, under-voltage protection and thermal shutdown.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	7-28	V
Output Current	I_o	0.9	A

FEATURES

- Wide 7V to 28V Operating Input Range
- Up to 0.9A Output Current for Each Channel
- Total Max Current 2.4A (all outputs combined)
- R_{dson} (HS + LS) Typically 1.1Ω at 25°C , Maximum 2Ω at 150°C
- Very Low Quiescent Current $I_{VS} < 6\mu\text{A}$ in Standby Mode Versus Total Temperature Range
- Serial Data Interface
- Short-Circuit Protection
- Under-Voltage Protection
- Available in AEC-Q100 Grade 1

APPLICATIONS

- Drive various loads in automotive and industrial applications
- DC Motors

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are registered trademarks of Monolithic Power Systems, Inc.

QUICK START GUIDE

1. Power Requirements

- a. Power supply range: 7V to 28V.

Figure 4: EVQ6524-R-00A Bird's-eye View

2. Setup Condition

- a. Adjust the power supply VIN with recommended operating range (7V to 28V).
- b. Input for VCC power supply is on board (switch SW1 upwards to select 3.3V logic supply).
- c. Easy adaptation of loads by CN2 – CN4.
- d. EN alternatively connected to VCC or GND, selected by S1 of SW3.
- e. Serial data interface control via CN1 connector.

3. Monitors

- a. For full-bridge application, indicate rotation direction of DC motors can be observed by LEDs if S2 – S4 of SW3 switch to ON position.
- b. All pins are easy accessible via test points.
- c. A low output at FAULT indicates that the IC has detected an over-temperature or over-current condition.
